

App Store Monitoring

Fake or unauthorized apps threaten brand, business and customer

Digital businesses big and small rely on customer-facing apps as platforms for sales, support and customer experiences. Fraudsters and scammers recognize these apps as an opportunity to syphon from reputable online brands, defrauding business and customer. In some cases, it's brand and trademark infringement with fraudsters engaging in unauthorized distribution of branded apps. In other cases, it's fake apps or malware-laced apps aimed at stealing credentials. And in yet other instances, it's scam sites, hosting fake or malicious apps. Whatever the case, the effects can be damaging and lasting to brand reputation and trust.

Use Bolster to detect and take down fake apps and scam sites in real-time

With Bolster App Store Monitoring, you'll get immediate visibility and control. Our next-generation fraud prevention platform and trained experts will actively monitor major app stores and 3rd party app stores, over 500 in all, for unauthorized distributions and fakes apps impersonating your brand. The system will also apply deep learning and natural language processing to scour the Internet for app-related scam sites aimed at phishing credential theft.

Upon detection, our systems will automatically collect comprehensive evidence of brand and trademark infringement and phishing credential theft used to then trigger complete fully-automated takedown and removal processes. We'll ensure that fake or unauthorized apps are taken down and stay down. And for app-related scam sites or phishing credential sites detected, evidence will automatically be sent to global block lists in 6.5 seconds and full site takedowns will occur in as little as 2 minutes.

AI-Driven Detection
