

# Domain Protection

## Protect against domain attacks and infringements globally

In the digital world, your Internet domain is your brand and the portal into your customers' experience. Domain squatters, hackers, and scammers know this too, and frequently stage campaigns and attacks to exploit and infringe on your domain and brand. In some cases, criminals take advantage of the explosion of top-level-domains (TLDs) to find a TLD not currently registered. In other cases, it's a typosquatting instance. In both cases, the problem can quickly get out of control for brand protection, fraud prevention and security teams given the speed with which criminals operate and scope of the attack surface at their disposal.

## Domain Protection with Bolster – Your first line of defense

With Bolster Domain Protection, you'll get immediate peace of mind. Our AI-driven Fraud Prevention platform will actively monitor your domain assets and scan the Internet for existing and newly registered domains and sites that appear to pose threats to your digital business and brand.

Using our Domain Protection capabilities, you will be able to catalog and track all domain-related threats in real-time with easy-to-use dashboarding. The platform will detect look-alike and typosquat domains and will actively monitor these domains for signs of weaponization. If fake sites or URLs are detected, the platform will scan them in real-time using the platform's AI smarts to render a phishing or scam verdict in less than 100 milliseconds with a 1 in 100,000 false-positive rate.

### *AI-Driven Detection*

Detect domain threats, including look-alike domains & fake sites across 1000+ legacy & new gTLDs & ccTLDs.

### *Continuous Monitoring*

Monitor active & passive DNS, zone & WHOIS files & SSL certificates & logs to identify changes to threat landscape.

### *Rich Threat Intelligence/Dashboard*

Rich data & intuitive dashboards makes it easy for brand, fraud & security teams to collaborate & take action on identified threats.

### *Automatic Takedown Capabilities*

Based on tier selected, perform automatic zero-touch takedowns removing malicious sites in as little as 2 minutes globally.
